Technical Notes:

Price – is the amount or value paid in exchange for the commodity, or a service rendered.

Retail/Consumer Price – refers to the price at which a commodity is sold in small quantities for consumption.

Weight – a value attached to a commodity or group of commodities to indicate the relative importance of that commodity or group of commodities in the market basket.

Market Basket – a term used to refer to a sample of goods and services that are commonly purchased and bought by an average Filipino household.

Consumer Price Index (CPI) – is a measure of the average change overtime in the prices paid by urban consumers for a market basket of consumer goods and services.

Inflation Rate - is the percentage increase or decrease in prices during a specified period, usually a month or a year and it is derived from CPI. It is interpreted in terms of declining purchasing power of money.

Unit of Measure - refers to which a commodity is customarily traded in the market, and it is the actual unit in which the associated values are measured.

Commodity Specifications – refers to the detailed description of the commodity such as a brand packaging, size and unit of measure or other characteristics that will best describe the product/commodity and are important in the determination of prices.

Uses of the CPI

As an indicator, the CPI is the most widely used in the calculation of the inflation rate and purchasing power of the peso. It is a major statistical series used for economic analysis and as monitoring indicator of government economic Policy.

The CPI is also used as a deflector to express value series in real terms, which is, measuring the change in actual volume of transaction by removing the effects of price changes. The CPI also serves as input in wage adjustments through the collective bargaining agreements.
