Technical Notes

Vital statistics are derived from information obtained at the time when the occurrences of vital events and their characteristics are inscribed in a civil register.

Vital acts and events are the births, deaths, fetal deaths, marriages, and all such events that have something to do with an individual's entrance and departure from life together with the changes in civil status that may occur to a person during his lifetime. Recording of these events in the civil register is known as vital registration and the resulting documents are called vital records.

Death is a permanent disappearance of evidence of life. A fetus with an intrauterine life of seven months or more and born alive at the time it was completely delivered from the maternal womb but died later shall be considered as death and shall be registered.
